What to do...

1. Each person writes five numbers between 10 and 100 on a piece of paper.
2. Draw a circle round each number.
3. Throw a 0-9 dice or place the 0-9 number cards face down and pick one at random. Reshuffle between each go.
4. Look at the number – if any players can add it to any of their numbers and get a multiple of ten, they may cross out that number.
5. First one to cross out all five numbers is the Bingo winner!

The number is four. I have sixty-six on my page, so I can add four to get seventy!

You can cross sixty-six out. I can’t cross anything out this time. Let’s throw the dice again.
